PRIVATE DEMENTIA CHECK-IN

Your Dementia Risk Report

Based on your answers to the [Company] dementia check-in

Your result is in the healthy range, with room to grow.

Most of your answers were strong. A few slips in Memory and Focus are common and often come from tiredness, stress, or rushing. Small daily practice is the easiest way to keep these areas sharp.

Your strongest area
Logic

2 areas to strengthen
Memory and Focus

Your result today, on 4 levels:

Low	Mild You are here	Moderate	Elevated

YOUR RESULTS

Your 4 areas

Based on your answers about memory, focus, logic, and language.

🧠 Memory — To strengthen

Short memory games help you hold on to names, lists, and details.

🎯 Focus — To strengthen

Focus training helps you follow conversations and finish tasks without distractions.

🧩 Logic — Strength

You spot patterns and solve problems quickly.

💬 Language — Strength

You find the right words easily.

Everyday habits

😴 Sleep — Try this

Aim for 7–8 hours. Go to bed at the same time each night, and keep screens away for the last 30 minutes.

👥 Time with people — Keep it up

You stay close to friends and family. Keep it up — conversation is one of the best workouts for memory.

🚶 Movement — Try this

A 20-minute walk most days supports blood flow to the brain. Start with what feels easy.

🧩 Your brain routine — Try this

Reading is a good start. Add 5 minutes a day of active practice — games that make you remember, count, and plan. Your hobby — music — also keeps your mind engaged.

YOUR AGE GROUP

Compare to your age

How common are memory and thinking changes among Americans aged 65 and older?

2 in 3	have no memory or thinking problems	**68%**
1 in 5	have mild changes in memory or thinking that don't stop everyday life	**22%**
1 in 10	live with dementia	**10%**

Your check-in is not a diagnosis and does not place you in any of these groups. Source: Manly et al., JAMA Neurology, 2022 — a national study of U.S. adults 65+.

Normal with age, or worth a doctor's visit?

✓ Common with age	! Worth mentioning to your doctor
Forgetting a name or an appointment, then remembering it later	Forgetting recent events and asking the same questions again and again
Losing your glasses or keys, then retracing your steps to find them	Putting things in unusual places and being unable to retrace your steps
Sometimes struggling to find the right word	Stopping in the middle of a conversation with no idea how to go on
Losing track of the day of the week, then figuring it out	Losing track of dates, seasons, or where you are
Making an occasional mistake with a bill	Trouble following a familiar recipe or keeping track of monthly bills
Feeling tired of social plans now and then	Pulling away from hobbies, friends, and activities you used to enjoy

Adapted from the Alzheimer's Association, "10 Early Signs and Symptoms of Alzheimer's".

WHAT YOU CAN CHANGE

14 things linked to dementia

Experts estimate that **nearly half of dementia cases (45%)** are linked to these 14 factors. Many of them can be changed at any age.

Hearing loss	7%	Check your hearing; use hearing aids if needed
High LDL cholesterol	7%	Check cholesterol with your doctor
Less education early in life	5%	Keep learning — it's never too late
Social isolation	5%	Stay in touch with people every week
Depression	3%	Talk to someone if you feel low for weeks
Head injury	3%	Wear a seatbelt, prevent falls at home
Air pollution	3%	Avoid smoke and heavy traffic when you can
Physical inactivity	2%	Walk 20 minutes most days
Smoking	2%	It's worth quitting at any age
Diabetes	2%	Keep blood sugar in range
High blood pressure	2%	Check it once a year
Untreated vision loss	2%	Have your eyes checked
Obesity	1%	Small changes in diet and activity
Too much alcohol	1%	Keep it to a few drinks a week

% — share of dementia cases worldwide linked to each factor. Highlighted rows are the ones you can act on after 60. Source: Lancet Commission on dementia prevention, 2024.

EVERYDAY TIPS

Simple tricks for everyday life

Small habits that make names, keys, and conversations easier — for all 4 areas.

🧠 Memory

- Say a new name out loud and link it to a picture: “Rose — red scarf”.
- Give your keys, glasses, and phone one home spot, and always put them back there.
- Write it down at once: keep one small notebook or one note on your phone.

🎯 Focus

- Do one thing at a time: turn off the TV when you talk on the phone.
- Before a task, say out loud what you are about to do.
- Break big jobs into short steps and tick each one off.

🧩 Logic

- Plan your day the evening before: three things, in order.
- Try a new route on your walk or a new recipe each week.
- Play a strategy game — cards, chess, or sudoku — with someone else.

💬 Language

- Read aloud for a few minutes a day.
- When a word slips away, describe it — the word often comes back.
- Tell someone about your day or a book you read.

WHAT TO DO NEXT

Your next steps

1. Start training your memory with the [Company] app — 5 minutes of brain games a day, with extra focus on Memory and Focus.
2. Retake this check-in in 4 weeks and compare your result.
3. Notice your everyday moments: names, keys, following a conversation. Write down anything that feels harder than usual.

Your first week: build up your weaker areas

5 minutes a day. Most days go to Memory and Focus, the areas with the most room to grow. Large, clear games. No rushing.

Day 1	Memory	**Memo** · remember and recall
Day 2	Focus	**Dots** · keep your attention steady
Day 3	Memory	**Pair Tiles** · find matching pairs
Day 4	Focus	**Fast Math** · quick counting
Day 5	All areas	**Daily Training** · 4 short games, one for each area
Day 6	Memory	**Memo** · remember and recall
Day 7	—	**Look back** · Write down 3 moments this week when your memory worked well.

Your plan is ready in the [Company] app

Play your daily games, track your progress every week, and retake this check-in anytime.

Open the app

Install [Company] from the App Store or Google Play and sign in with the same email you used here.

This check-in is for general information and personal wellness only. It is not a medical test and does not diagnose any condition. If you are worried about your memory, please talk to a healthcare professional.
